CALDAN CONVEYOR A/S

ELECTRICAL DEPARTMENT

For more than 30 years Caldan's in-house electrical department has been producing and constructing various control systems for our conveyors.

Our services start with a thorough analysis of the customer's existing material flow, and go all the way to starting-up and handing over the system if required.

Our product and service range:

- Programmable logic controller (PLC) optimising the material flow
- Interface with customer network (host)
- Visualization software permitting direct and operator friendly access to all mechanical and technical process parameters
- Operational and performance data capture
- System diagnostics
- Maintenance and operator training

Optimised material flow through:

- Destination controls with variable coding (electrically writeable data medium, moveable reflectors or switching cams)
- Destination controls with fixed coding (mechanical data plate for environments with high temperatures and aggressive fumes)
- Online customer support
